Performance Test Report

Current execution status and required follow-up

Execution status

Test branch: feature/TEST-042-final-testing-deliverables; test repository SHA: fc87f2c.

No approved dedicated performance target, scoped synthetic account, or completed performance workflow run was available when this report was generated. There are no measured latency, throughput, error-rate, timeout, or request-count values to report.

Status: BLOCKED / NOT RUN. This is an execution-status report; it is not a performance pass and must not be submitted as measured performance results.

Evidence required to complete the run

- Configure the protected dedicated-performance GitHub Environment and its required reviewer.
- Set PERFORMANCE_BASE_URL and PERFORMANCE_ALLOWED_HOST_SUFFIX to the approved non-production Gateway.
- Store STUDENT_TEST_USERNAME and STUDENT_TEST_PASSWORD as environment secrets; never include credentials in the report.
- Set optional PERFORMANCE_COURSE_ID only when the test needs a safe course fixture.
- Dispatch the bounded workflow with its confirmation phrase and deployed backend SHA.
- Retain the successful workflow URL and sanitized artifact with request count, latency percentiles, throughput, error rate, and timeout count.
- Run at least twice before selecting a baseline; record each run's duration and workload.

Interpretation

The suite is a bounded performance baseline, not a load/stress or capacity certification. Compare measured results with project targets only after a successful run against the approved dedicated environment.
